

Overview

- This is used to connect PROFIBUS stations to the PROFIBUS bus cable
- Easy installation
- The insulation piercing method of the FastConnect connectors reduces installation time considerably
- Integrated matching resistors (not for 6ES7 972-0BA30-0XA0)
- Connection of PG using a special bus connector is possible without the need to install network nodes.

Application

The RS 485 bus connector for PROFIBUS is used to connect a PROFIBUS station or a PROFIBUS network component to the bus cable for PROFIBUS.

Design

Different versions of the bus connector, optimized for the connected devices, are available:

- Bus connectors with axial cable outlet (180 °C) e.g. for PCs and SIMATIC HMI OPs, for transmission rates up to 12 Mbit/s with integrated bus terminating resistor
- Bus connector with vertical cable outlet (90 °C)

This connector enables a vertical cable outlet (with and without PG interface) for transmission rates up to 12 Mbit/s with integrated bus terminating resistor. With transmission rates of 3, 6 or 12 Mbit/s, the SIMATIC S5/S7 connecting cable is required for the connection between the bus connector with additional PG interface and a programming device.

- Bus connector with 30° cable outlet (low-cost version) without PG interface for transmission rates up to 1.5 Mbit/s and without integrated bus terminating resistor.
- PROFIBUS FastConnect RS 485 bus connector (90° or 180° cable outlet) with transmission rates up to 12 Mbit/s for fast, easy mounting with insulation displacement method (for rigid and flexible wires).

Function

The bus connector is plugged directly to the PROFIBUS interface (9-pin Sub-D connector) of the PROFIBUS node or a PROFIBUS network component.

The incoming and outgoing PROFIBUS bus cable is connected through four terminals in the connector.

The line termination integrated in the bus connector can be connected through an externally accessible switch (not with 6ES7 972-0BA30-0XA0). Here, incoming and outgoing bus cables are separated in the connector (isolating function).

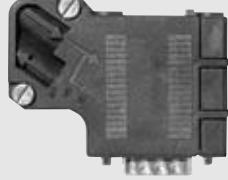

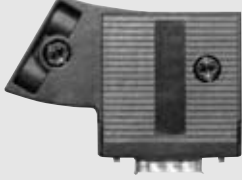

This is mandatory at both ends of a PROFIBUS segment.
